INTRODUCION

The proposed project is a hotel booking application that allows customers to register, select room types, and book rooms based on availability. After completing the booking, customers can receive confirmation details. This system helps improve service quality and saves time for both customers and hotel staff

PROBLEM STATEMENT

Many hotels face difficulties in managing room reservations and organizing customer information manually. Customers need an easy way to book rooms before arriving at the hotel, while hotels need a system to manage bookings efficiently

PROPOSED SOLUTION

The Hotel Booking System provides a solution to these problems by allowing customers to search for available rooms, make reservations, and manage their bookings online. The system also helps hotel staff keep track of reservations, check-in and check-out processes, and customer details

SDLC MODEL

.IN THIS PROJECT, WE USED THE **WATERFALL MODEL**
.THE WATERFALL MODEL IS A STEP-BY-STEP DEVELOPMENT PROCESS

:THE PHASES INCLUDE
,REQUIREMENTS ANALYSIS, SYSTEM DESIGN, IMPLEMENTATION, TESTING
.AND MAINTENANCE

.EACH PHASE MUST BE COMPLETED BEFORE MOVING TO THE NEXT ONE

PROJECT PLAN

TO ORGANIZE THE PROJECT TASKS, WE USED A
.GANTT CHART

THE GANTT CHART SHOWS THE TIMELINE OF THE
PROJECT PHASES SUCH AS PLANNING
REQUIREMENTS ANALYSIS, DESIGN
DEVELOPMENT, AND TESTING

IT HELPED US MANAGE THE SCHEDULE AND
DIVIDE TASKS AMONG TEAM MEMBERS

ACTORS

ACTORS ARE THE USERS WHO INTERACT WITH THE SYSTEM

OUR SYSTEM HAS THREE MAIN ACTORS:

CUSTOMER – WHO SEARCHES AND BOOKS ROOMS

HOTEL STAFF – WHO MANAGE RESERVATIONS

SYSTEM ADMINISTRATOR – WHO MANAGES AND MAINTAINS THE SYSTEM

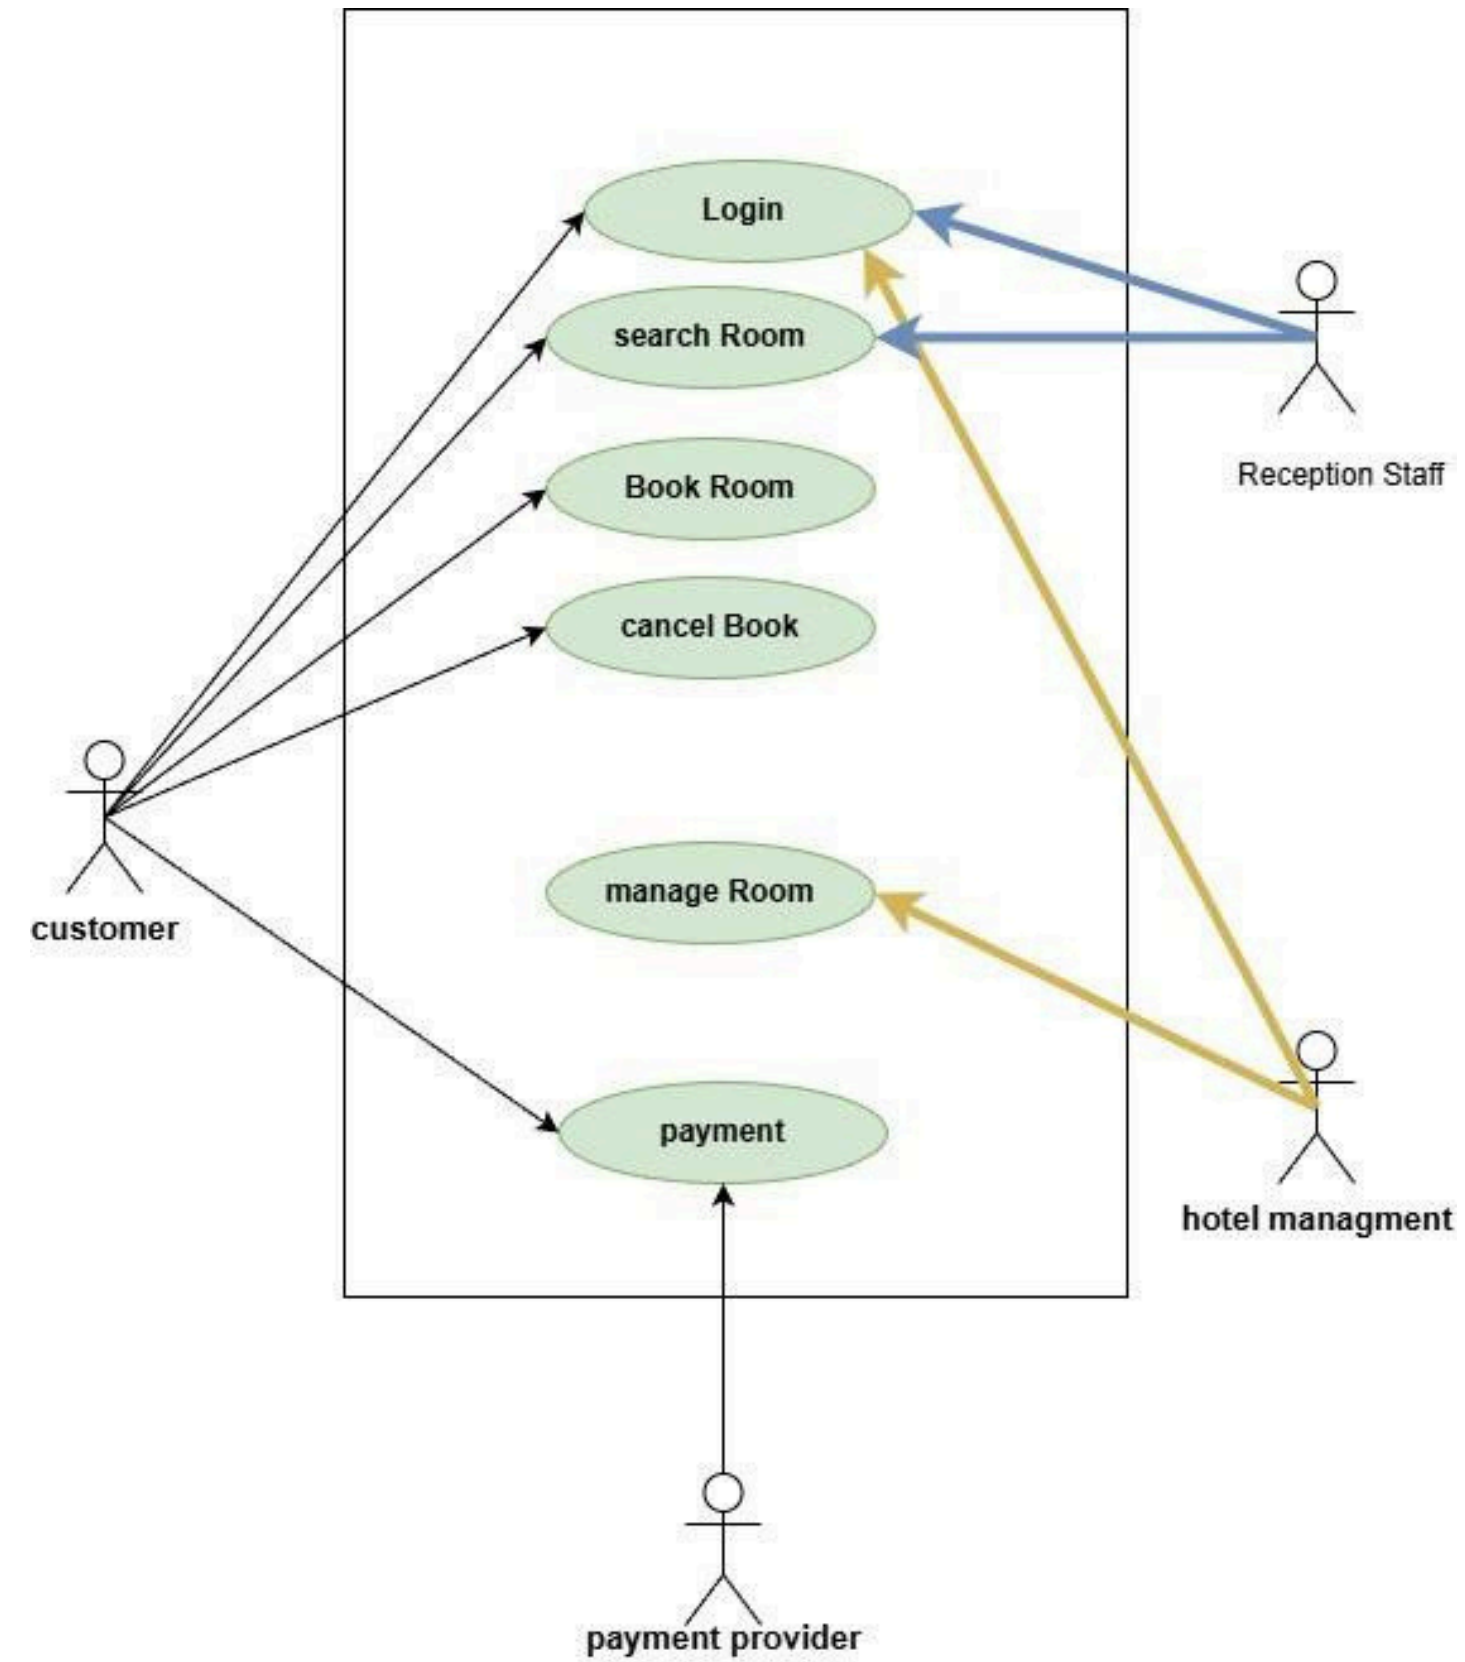

FUNCTIONAL REQUIREMENTS (FR)

- 1-Customers can book rooms online.
- 2- Staff can add, update, or delete room information.
- 3- The system updates room status automatically.
- 4- The system supports different payment methods.
- 5- Customers can create accounts and log in.
- 6- Customers can view, modify, or cancel bookings.
- 7- Customers can search for available rooms.
- 8- The system sends booking confirmation.

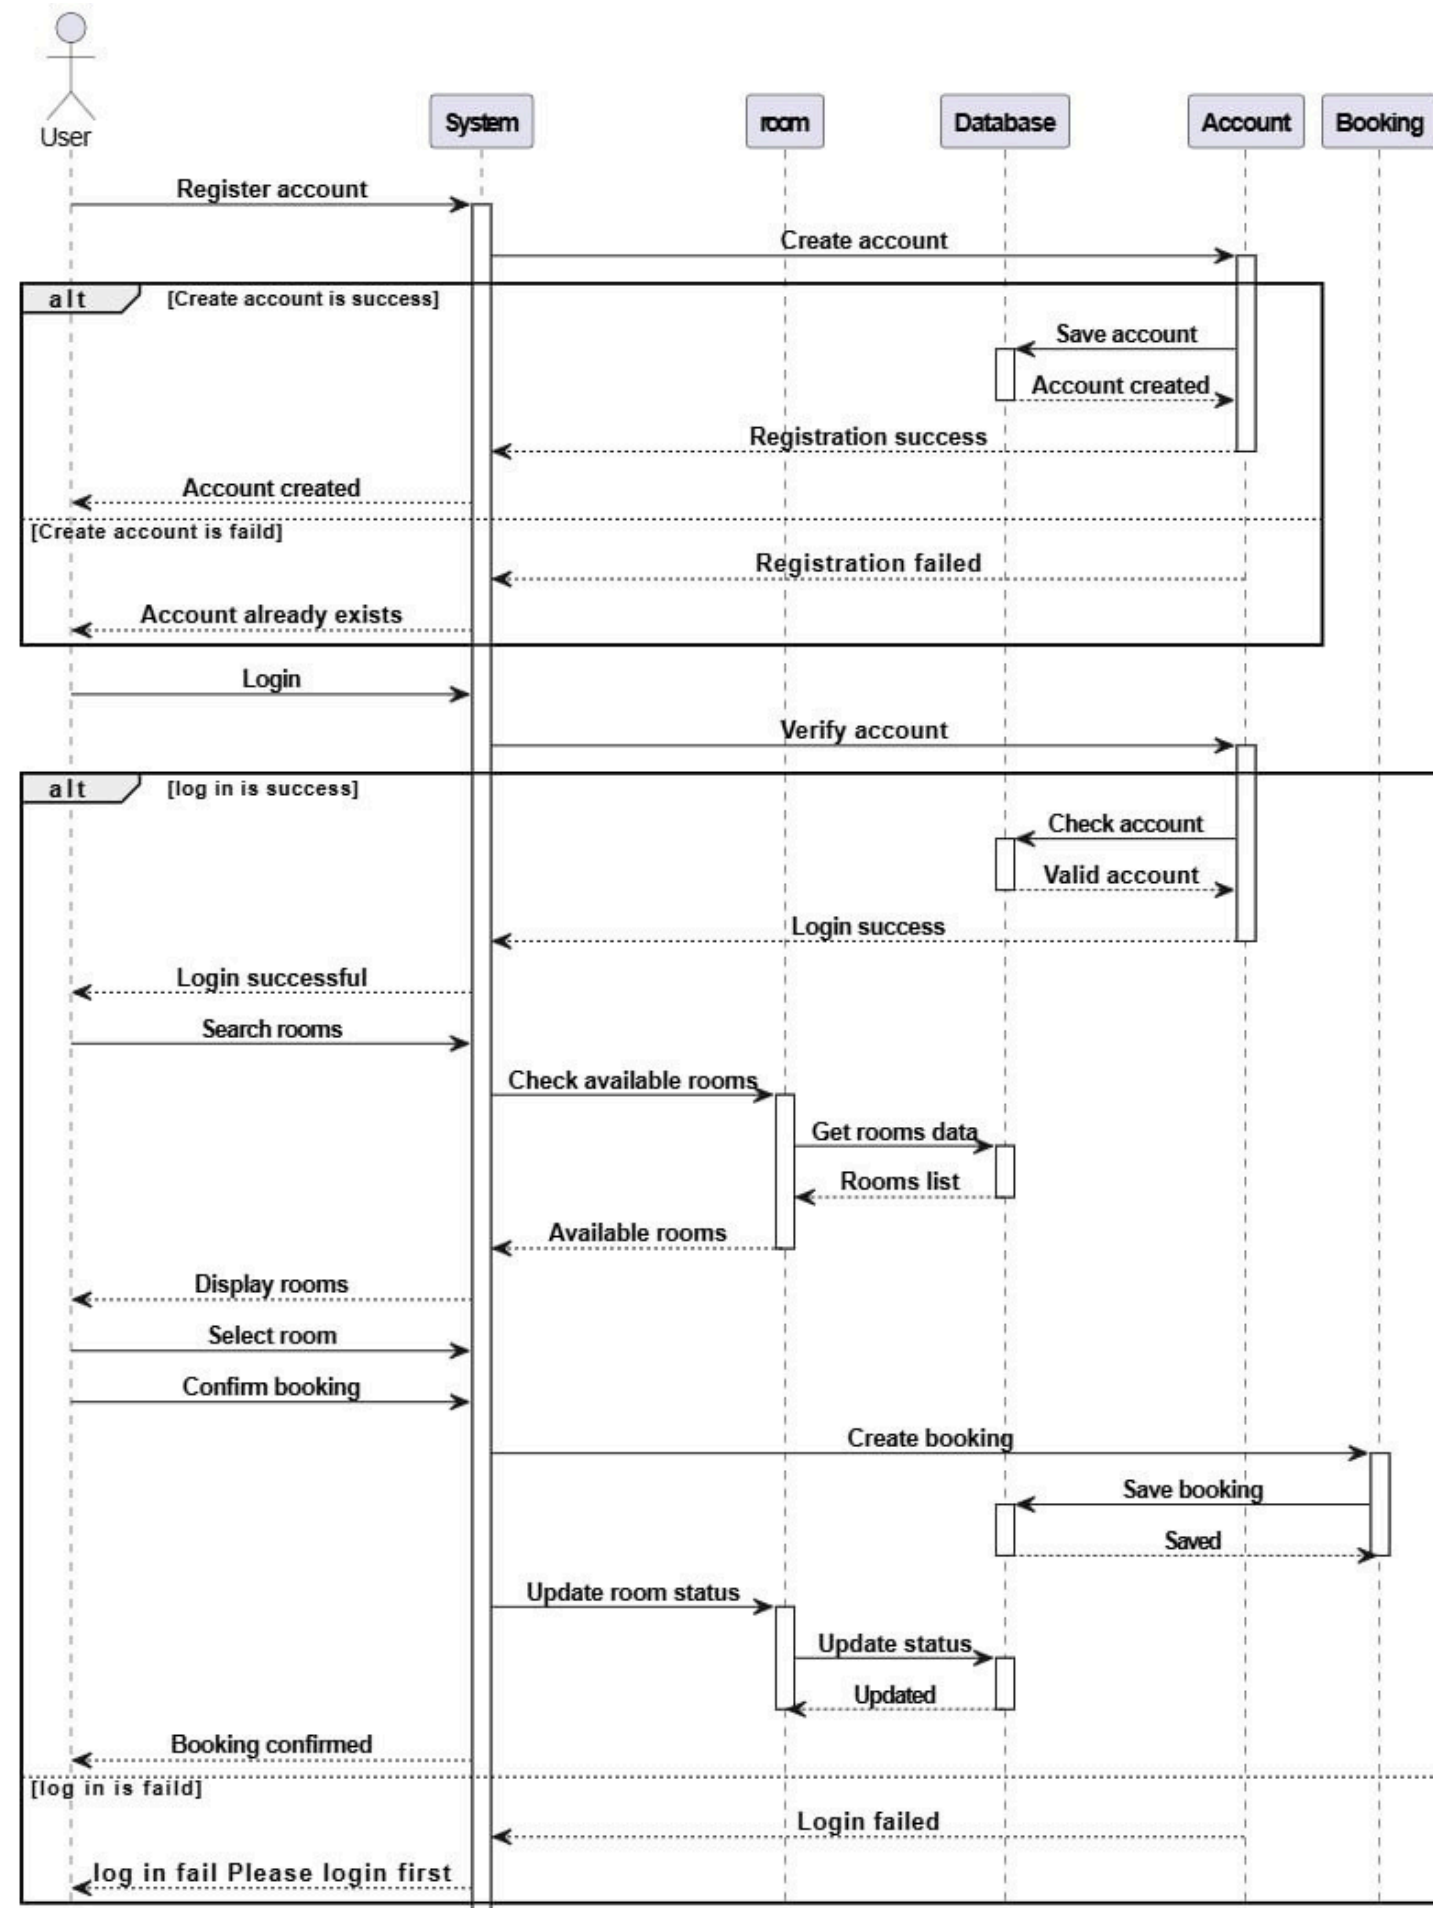

NON-FUNCTIONAL REQUIREMENTS (NFR)

- 1- The system protects user data securely.
- 2- The system responds quickly to user requests.
- 3- The system stores data in encrypted form.
- 4- The system provides a simple and user-friendly interface.
- 5- The booking process is clear and easy to use.
